

Dear Rahul Ghorpade!

Thank you for stopping by at PcPal.

We think these specs would work best for your future laptop.

### Processor

Looking at your usage, an **Intel i5-10th Gen/AMD Ryzen 5 4000** processor should set you up for pretty much everything.

### RAM

Your usage is heavy, we recommend opting for at least **16GB DDR4** of RAM

### Storage

High speed storage in your use is a must, opt for a **512GB SSD**

### Graphics card

Since your usage doesn't need you to have dedicated graphics, **integrated** GPUs should suffice.

### Display

An **HD** display should set you up for more or less anything you throw at it
